Educational Technology Minor

Is the Educational Technology Minor the right choice for you?

Two audiences exist for the Minor in Educational Technology - students pursuing careers in education and those preparing for careers in government, business, and industry. Employers in today's workforce need candidates who can work with team members, think critically, and take initiative to solve problems. Students who complete the Minor in Educational Technology will potentially possess an advantage when seeking employment in educational settings such as K-12 schools, or in industries that value the employee's ability to apply learning principles to create effective learning environments.

How do I add the minor to my degree plan?

Discuss with advisor and then complete and submit the *Change of Major Form* to the Records Office
