

Nursing BS Student Learning Outcomes

1. Provide professional quality care as a generalist that promotes patient safety.
2. Employ the elements of evidence-based practice, including evaluating evidence and integrating best practices into patient care.
3. Integrate ethics and ethical practice into all aspects of nursing care.
4. Demonstrate an understanding of healthcare policy, quality assurance, finance, and regulatory environments, including policy development, disparities in healthcare, and social factors that affect healthcare.
5. Exhibit proficiency in patient care technologies, healthcare information systems, interprofessional communication, collaboration, and relationship-building skills to support and improve patient health outcomes.
6. Implement health promotion and disease prevention strategies for individuals and populations including diverse, vulnerable populations, and cultures.
7. Apply nursing, organizational, and systems leadership concepts across health care settings.

The BSN program aligns with the following professional nursing standards and guidelines:

- The Essentials: Core Competencies for Professional Nursing Education of Baccalaureate Education (AACN, 2021)
- The American Nurses Association Code of Ethics for Nurses (ANA, 2015)
- The American Nurses Association Scope and Standards for Practice (ANA, 2015)
- Quality and Safety Education for Nurses (QSEN, ND)
